Practical: 11

```
// Write a program that demonstrates asynchronous behavior using a callback
// function. For example, create a function that simulates fetching data from an
// API and invokes a callback with the fetched data.

// Simulate an asynchronous API request
function fetchDataFromAPI(callback) {
    setTimeout(function () {
      const data = {
        userId: '072',
        id: '21CE072',
        title: 'Practical 11',
        body: 'This is some sample data fetched from an API.',
      };
      callback(data);
    }, 2000); // Simulate a 2-second delay
  }

  // Callback function to handle the fetched data
  function handleData(data) {
    console.log('Data received:', data);
  }

  // Calling the fetchDataFromAPI function with the callback
  console.log('Fetching data...');
  fetchDataFromAPI(handleData);
  console.log('Request sent asynchronously.');
```

```
PS D:\Code for trial\Node.js\AWT\PracticalList> node '.\Practical 11.js'
Fetching data...
Request sent asynchronously.
Data received: {
  userId: '072',
  id: '21CE072',
  title: 'Practical 11',
  body: 'This is some sample data fetched from an API.'
}
```

Practical: 12

```
// Create a program that reads a file asynchronously using callbacks and displays
// its contents.
import fs from 'fs'

// Function to read a file asynchronously and display its contents
function readFileAsync(filePath, callback) {
  fs.readFile(filePath, 'utf8', (err, data) => {
    if (err) {
      callback(err);
```

```
    } else {
      callback(null, data);
    }
  });
}
const filePath = 'Data.txt';
readFileAsync(filePath, (err, data) => {
  if (err) {
    console.error('Error reading file:', err);
  } else {
    console.log('File contents:');
    console.log(data);
  }
});
```

```

Practical: 13

```
// Write a program that uses Promises to handle asynchronous
operations. For example, create a function that returns a Promise to
fetch data from an API and resolve it with the fetched data.
// Implement error handling using Promises by rejecting a Promise
with an error message in case of failure.

// Function that simulates fetching data from an API
function fetchDataFromSimulatedAPI() {
    return new Promise((resolve, reject) => {
      // Simulate a delay like the time it takes to fetch data in
real api
      setTimeout(() => {
        const Data = {
          id: '074',
          name: '21CE072',
          description: 'Practical 13',
        };
        resolve(Data);
      }, 2000); // Simulated delay of 2 seconds
    });
  }

  fetchDataFromSimulatedAPI().then(data => {
      console.log('Data fetched successfully:', data);
    })
    .catch(error => {
      console.error('Error in fetching the Data:', error);
    });
```

```
PS D:\Code for trial\Node.js\AWT\PracticalList> node '.\Practical 13.js'
Data fetched successfully: { id: '074', name: '21CE072', description: 'Practical 13' }
```

Practical: 14

```
// Convert a Promise-based asynchronous function into an async/await style function. For example, rewrite a function that fetches data from an API using async/await.
// Write a program that utilizes multiple async/await functions to fetch data from different APIs sequentially and display the combined results.
// Simulate fetching data from API1
async function fetchDataFromAPI1() {
    try {
      // Simulated data
      const data = { message: 'ID: 21CE072' };
      return data;
    } catch (error) {
      throw new Error('Error fetching data from API1: ' + error.message);
    }
  }

  // Simulate fetching data from API2
  async function fetchDataFromAPI2() {
    try {
      // Simulated data
      const data = { message: 'Practical 14' };
      return data;
    } catch (error) {
      throw new Error('Error fetching data from API2: ' + error.message);
    }
  }

  //fetch data from different APIs sequentially
  async function fetchAndDisplayCombinedData() {
    try {
      const data1 = await fetchDataFromAPI1();
      const data2 = await fetchDataFromAPI2();
      // Combine and displaying the result
      const combinedData = { data1, data2 };
      console.log('Combined Data:', combinedData);
    } catch (error) {
      console.error(error.message);
    }
  }

  fetchAndDisplayCombinedData();
```

```
PS D:\Code for trial\Node.js\AWT\PracticalList> node '.\Practical 14.js'
Combined Data: {
  data1: { message: 'ID: 21CE072' },
  data2: { message: 'Practical 14' }
}
```
